

Penn-Delco delivers advanced technology for digital in-class and remote learning.

Penn-Delco continues to tap new technology to assist our administration, teachers, and students with virtual learning; streamlining management and delivering a better learning experience.

While [GoGuardian](#) has been part of the district's tool box for its basic cyber security features, this year we have expanded our use to include the entire suite of products allowing us to unify content filtering, classroom management, device management, and school mental health tools.

Here is a brief description of the technology we have in place:

Content Filters

On-site and remote content filters monitor, manage, and filter school devices on our network to create a productive online learning environment and protect your student from harmful content.

Classroom Management Tools

Penn-Delco educators now can monitor students on their district-assigned devices keeping them on-track and engaged. The technology also includes tools to allow for work share and personalized chat, delivering teachers and students alike individualized, real time guidance when necessary.

Suicide prevention and mental health tools

Our current filters can spot warning signs for concerning search activity wherever the student is online using district devices. This technology works across search engines, chat, social media, email, web apps, and more. Questionable activity will be reported to school counselors and guardians.
